# Your Child's MEDICAL HOME

## Health Care with Your Family at the Center

### Information for Washington State Families

### What is a Medical Home?

- A "home base" for your child's health care needs
- A new way of thinking about how your child is cared for
- A family-centered approach to health care—your opinion matters!
- A health care team that looks at the whole child, not just your child's health issues

# What is a Medical Home?

A medical home is a way to provide high quality health care services that best meet the needs of your child and your family. It is not a building, house or hospital. It is a partnership between you and your family and your primary care doctor, nurse and clinic staff. Together, you make sure that the medical and non-medical needs of your child are met.

A medical home is sometimes also called a "health home."

## Your Medical Home Team:

- Respects your child and your family
- Shares information with you and includes you in decisions
- Provides primary health care including regular check-ups, developmental screening, "shots" and illness visits
- Works to catch problems early—which can prevent emergency room visits
- Helps you plan for and manage any chronic health problems
- Finds specialists when they are needed
- Helps connect you to resources in the community
- Helps lower family stress, health care costs, and missed school and work days

# What can our family do?

Below is a list of some things you can do to get the best health care for your child:

- Bring questions to doctor visits
- If you need it, ask for extra time when you schedule your visit
- Keep a folder or notebook with your child's health information
- Share any changes with your doctor
- Celebrate successes and talk about challenges
- Ask for something to be explained if you don't understand
- Work together to make a plan
- Ask for information to be written down
- Ask to meet with office staff who will be working with you and your child
- Let your doctor and staff know things they are doing right
